Transforming Education, Embracing Diversity

BridgeAI Multiplier Events Bring AI for Inclusive Education to Communities Across Europe

The BridgeAI consortium is proud to celebrate the successful completion of the project's six national Multiplier Events, marking an important milestone in disseminating the project's educational and policy achievements. Organised across Sweden, Spain, Türkiye, France, Greece, and Romania, these events brought together teachers, school leaders, policymakers, researchers, students, NGOs, and community representatives to explore how Artificial Intelligence can be used to foster more inclusive, ethical, and future-ready education systems.

Designed under Work Package 4, the multiplier events served as the bridge between the project's research, educational resources, and policy recommendations and the wider educational community. Participants had the opportunity to discover the BridgeAI Film Series, the AI & Education Syllabus, the Policy Reform Report, and the Action Plan while engaging in interactive discussions on the future of AI in education, digital inclusion, civic participation, and responsible innovation. The events also provided a platform for exchanging best practices, gathering stakeholder feedback, and strengthening cooperation between educational institutions and decision-makers. The WP4 methodology envisioned these conferences as national dissemination and validation events bringing together diverse stakeholders to present project results, discuss policy recommendations, and strengthen policy uptake.

Beyond the face-to-face meetings, the consortium expanded participation by offering online attendance options, allowing additional educators and stakeholders who could not travel to actively join the discussions. This hybrid approach significantly increased the project's outreach and ensured broader accessibility to the BridgeAI results.

Bridge AI

BridgeAI

The response from the educational community exceeded all expectations. Across the six countries, the multiplier events attracted more participants than originally targeted, demonstrating the growing interest in responsible Artificial Intelligence, digital transformation, and inclusive education. The high level of engagement, active discussions, and positive feedback received throughout the events confirmed the relevance of the project's outcomes and highlighted the increasing demand for practical AI resources and evidence-based policy recommendations in schools across Europe.

The multiplier events also played a crucial role in validating the project's final outputs. Feedback collected from teachers, educational authorities, AI experts, policymakers, and community organisations contributed to refining the Policy Reform Report and Action Plan, ensuring that the recommendations reflect the real needs and priorities of educational stakeholders. This collaborative process further strengthens the long-term impact and sustainability of the BridgeAI project by supporting future educational policies and encouraging the responsible integration of Artificial Intelligence into schools.

The BridgeAI consortium extends its sincere gratitude to every participant, speaker, expert, and partner organisation who contributed to the success of these events. Together, we have reached an even wider audience than anticipated, strengthened international cooperation, and taken another important step towards creating an education system where Artificial Intelligence is used responsibly to promote inclusion, equal opportunities, active citizenship, and lifelong learning.

The future of AI in education is collaborative, inclusive, and European—and BridgeAI is proud to be part of that journey.
